

NEW MODE OF ACTION FOR GREENHOUSE PESTS

Spear®-T controls four of the major greenhouse pests - aphids, spider mites, thrips and whiteflies - as efficiently as conventional insecticides, and with the safety and sustainability of biologicals. With an excellent safety profile for pollinators and other beneficials, Spear-T also has a short 4-hour restricted-entry interval and 0-day pre-harvest interval. The combination of these characteristics makes Spear-T a valuable new tool for greenhouse pest management, as well as a safe and versatile rotation partner in integrated pest management programs.

A SOLUTION BY VESTARON

Vestaron is dedicated to improving the safety, efficacy and sustainability of crop protection. We aim to displace our reliance on conventional synthetic pesticides with biological peptides that are designed for safety to humans, birds, fish, pollinators and the environment. As part of this, the company has developed a proprietary, fermentation-based, peptide production platform that is leading to the development of a broad range of biological crop protection and trait products.
